

Monitor Connector Boxes

Protect your LCD video monitor and make it easier to use

Some smaller LCD monitors use breakout cables for audio and video input, usually with a custom plug on the monitor end. Repeated insertions of the breakout cable into the custom socket can wear or damage it, resulting in an expensive repair.

The alternative is a Monitor Connector Box. It is permanently hardwired into the monitor's custom socket, eliminating wear. The connector box has industry standard connectors for interfacing, so should replacements ever be required, they are inexpensive and quick to replace.

Standard connectors are XLR4 for 12 VDC power, female BNC for video and female RCA for audio, but different connectors can be fitted if you prefer (please contact Sales).

A connector box is currently available for the Panasonic TC-7WMS1 7" LCD monitor. We are happy to design boxes for other monitors; please contact us to discuss your requirements.
